

Project Proposal

Shop Management System

1) Brief : The Shop Management System is a web-based solution designed to simplify and enhance retail store operations. This system provides a comprehensive platform for managing inventory, processing sales, tracking customer interactions, and generating detailed reports. It ensures an efficient and user-friendly experience for administrators, sellers, and customers through a secure role-based login system. The project will be developed using HTML, CSS, JavaScript for the frontend, PHP for backend logic, and XAMPP as the development environment, integrating SQL for data management and a dedicated server for hosting. This system aims to improve workflow efficiency, minimize manual efforts, and enhance the overall shopping experience for customers while offering business insights through data analytics.

2) Feature List / Functionalities *The system will include the following key features:*

a) User Management:

- Admin, Seller, and Customer login system
- Role-based access control

b) Inventory Management:

- Add, update, delete products
- Track stock levels

c) Sales Management:

- POS (Point of Sale) system for billing
- Purchase and Bill printing
- Order history tracking

d) Customer Management:

- Store customer details
- Purchase history tracking

- Loyalty and discount program

e) Supplier Management:

- Manage supplier information
- Track product procurement

f) Customer Features:

- Customer account creation and login
- Browse products and check availability
- Add products to cart and place orders
- View order history and track orders
- Provide product reviews and ratings
- Receive personalized promotions and discounts

g) Reporting & Analytics:

- Daily, weekly, and monthly sales reports
- Inventory usage reports
- Profit and loss analysis

3) Development Plan The development process will be divided into the following phases:

Phase 1: Planning & Requirement Analysis (Week 1-2)

- Define project scope and objectives
- Gather requirements from potential users
- Finalize the feature list and system architecture

Phase 2: UI/UX Design (Week 2-3)

- Create wireframes and mockups
- Design user-friendly interfaces using HTML, CSS, and JavaScript

Phase 3: Frontend Development (Week 3-5)

- Implement the designed UI using HTML, CSS, and JavaScript
- Integrate frontend with backend API

Phase 4: Backend Development (Week 5-7)

- Develop the database structure in SQL
- Implement authentication and role management
- Develop core functionalities using PHP

Phase 5: Testing & Debugging (Week 7-8)

- Perform unit testing and bug fixing
- Conduct security and performance testing

Phase 6: Deployment & Maintenance (Week 8-9)

- Deploy on a XAMPP server
- Provide user documentation and training
- Monitor system performance and fix any post-deployment issues

This structured approach ensures that the Shop Management System is developed efficiently, meeting the needs of shop owners while maintaining reliability and security.
